

Due Diligence Statement — Deforestation Risk Screening

Operator: Example Cocoa Cooperative Ltd (OP-2026-000123)
Commodity: cocoa
Region: Western North Region, Ghana
Deforestation cutoff: 2020-12-31
Forest-loss dataset: Hansen Global Forest Change v1.11 (2023 release)
Imagery: Sentinel-2 SR Harmonized, 2024 composite
Generated: 2026-10-08T14:21:55.421031+00:00

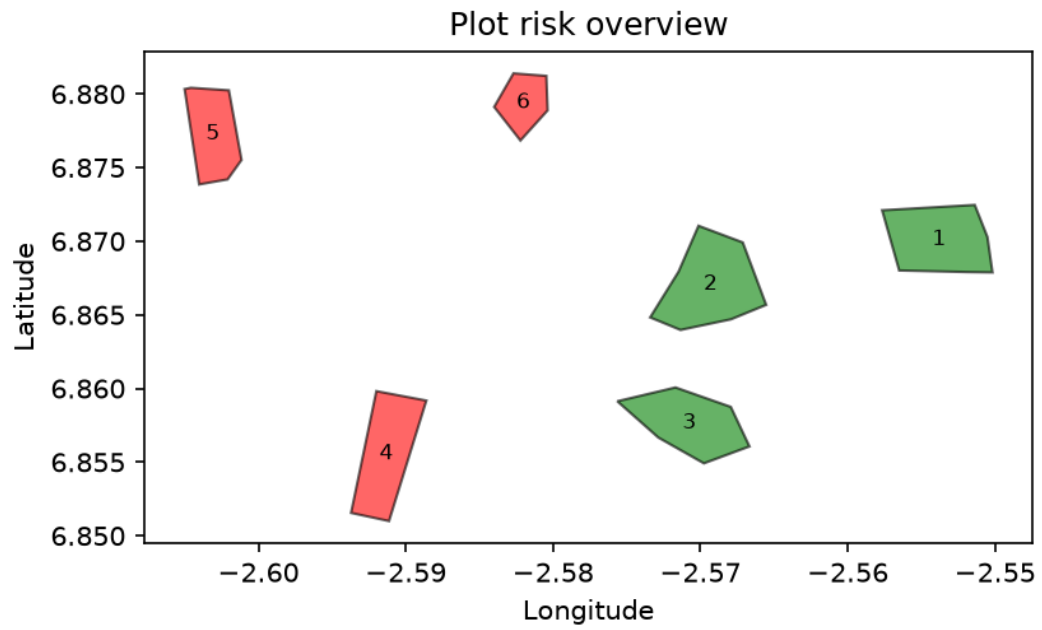

Scope and limitations

This report screens the deforestation-risk status of the plots listed below against post-cutoff satellite-detected forest loss. It is a screening tool for the deforestation-risk question only — it does not assess legality or traceability, and it is not a legal Due Diligence Statement. It relies on a 30 m global forest-loss dataset, which can miss sub-hectare clearance and can under- or over-count loss near plot edges. Cocoa agroforestry frequently reads as canopy cover from space, which is exactly why EUDR requires operator-supplied GPS polygons rather than remote farm detection: this report screens the polygon the operator provided, it does not find farms on its own.

Summary

Risk flag	Plot count	Total area (ha)
RED	3	67.60
AMBER	0	0.00
GREEN	3	106.35

Plot overview map

Plot detail

Plot ID	Centroid (lat, lon)	Area (ha)	Loss (ha)	Loss %	Risk	Mitigation
1	6.8701, -2.5538	34.60	0.00	0.00	GREEN	
2	6.8671, -2.5693	40.16	0.00	0.00	GREEN	
3	6.8577, -2.5707	31.59	0.00	0.00	GREEN	
4	6.8556, -2.5913	31.67	4.04	12.77	RED	Mitigation or exclusion required
5	6.8773, -2.6031	22.66	11.70	51.64	RED	Mitigation or exclusion required
6	6.8794, -2.5820	13.28	1.78	13.37	RED	Mitigation or exclusion required
